RoHS Bulletin #5

Dear Customer:

In keeping with our commitment to update you on XTech's RoHS initiatives we are pleased to provide the following:

- RoHS compliant platings and non-hexavalent chromate conversion coatings completed their qualification through our worldwide supply chain during June 2005.
- All of our aluminum alloys, extruded lineals and chrome-converted materials are now RoHS compliant.
- The majority of the remaining purchased components required for RoHS compliancy have also been qualified as part of an ongoing transitional inventory management plan.
- XTech remains positioned well to be able to guarantee compliant deliveries to OEM's and CM's on or before January 1, 2006.
- Our MIS database has been enabling real-time RoHS compliance marking since April 2005.

How XTech controls RoHS compliance identification:

Each item in our database and their associated bills of material work together to guarantee that RoHS compliant finished goods are identified. Both the shipping labels and the product labels are marked with RoHS symbols.

Likewise, the packing slips and invoices automatically print
 This line item is RoHS Compliant

Please do not hesitate to contact me if you have any questions about our RoHS program.

Steve Richardson XTech Compliance Program Manager srichardson@xtech-outside.com
